[Nov. 26 2003] – version 0.92 (only for SoftGrid 3.0)
Added Permissions Settings which make it possible to manage what permissions users have within the SoftGrid Client. Note: these settings do not apply to Administrators.

[Sep. 26 2003] - version 0.91 (only for SoftGrid 3.0)
First public release. From this point the Policy Template will only support the SoftGrid 3.0 Client.

[Apr. 6 2003] - version 0.90 (only for SoftGrid 2.05)
Almost all of the settings of the SoftGrid Client consists of Reg_SZ and Reg_Dword registry keys. So i figured "what the hell" lets make it all work better by creating a Policy Template for all the settings of the SoftGrid Client. This makes it possible to manage all these settings centrally from within Active Directory or an NT4 Domain.

Tested with:

Group Policies only (Not on NT4 Policies, should work).
Windows 2000 Terminal Services with SoftGrid Client 3.0.420, 3.0.428
Windows 2000 Professional with SoftGrid Client 3.0.420, 3.0.428
Windows XP Professional with SoftGrid Client 3.0.420, 3.0.428

How To:

The process is the same as with a normal Policy Template. This Policy Template consists of two parts; a user and a machine policy. Since the registry keys that the SoftGrid client uses aren't Windows 2000 Compliant you have to Unmark the Show Policies Only option from with the group policies like shown below.

Then the result should look like this:
